## Lufkin Creosoting (IXD008063661) Final Strategy Determination 03/27/88

## Rationale for Disposition

The Lufkin Creosoting site is an inactive wood treating facility which has undergone limited remedial action under RCRA authority (TWC). The remedial action consisted of removing several tanks containing creosote sludge. However, analysis of samples taken by Engineering Science, Inc. after the removal action was complete identified moderate levels of several constituents of creosote. Information provided by the site inspection report and the TDH indicate that there are not any surface water or groundwater receptors withing a 3 mile radius of this site. For this reason, this site is not considered a candidate for the NPL and no further investigative action is necessary under federal authority.
